Over 90 years of passion for high-quality power tools meets 45 years of enthusiasm for logistics and customized transport solutions.

FESTOOL was searching for

them to achieve a perfect result faster. More than 350 patents, more than 80 awards for products and companies, and above all satisfied customers, speak for FESTOOL's innovativeness.

In 2000, having been already separated from the corporation, the former subsidiary was then changed into Festool GmbH.

Every year FESTOOL participates in numerous exhibitions at home and abroad. The task assigned to BTG Plochingen consists of selecting the requested, stored

a suitable service provider - and found what they were looking for in BTG Plochingen.

Perfection is a tradition at FESTOOL. FESTOOL shares its passion for high-quality power tools with users and fans alike. The tools facilitate the work of professional craftsmen - and help

In 1925 shareholders Albert Fezer and Gottlieb Stoll founded the company „FESTO“.

In 1927 they produced the first portable chainsaw and in 1930 the first mobile circular saw.

In 1992 „FESTO“ transferred their tools division into „Festo Tooltechnic GmbH & Co. KG“.

exhibition stands and displays, as well as machines and accessories according to the event-specified guidelines from FESTOOL, packaging them safely for transport and delivering them just-in-time

to the German and European trade fairs.

BTG Plochingen stores all models of machines and accessories on offer by FESTOOL: Therefore for correct picking and well-functioning hand-

ling, it is vital that all processes are well thought through and perfectly organized.

At the end of an exhibition, BTG Plochingen arranges the collection from the exhibition site, the return transport to the logistics warehouse and the subsequent inspection of the exhibits.

The logistics team led by Tobias Meyerhoff and Tanja Kälberer are doing an excellent job: Up to now trade fairs in Switzerland, Poland, France, Great Britain, Cologne and Nuremberg were all mastered with great success.

BTG Internationale Spedition GmbH

BTG now also certified for Environmental Management

Bild: BTG

The Quality Management Team of BTG Internationale Spedition GmbH and BTG Warehouse Services GmbH was able to smoothly convert to the reformed quality standard ISO 9001: 2015.

This transformation of the quality management system moves away from rigid bureaucracy with its multitude of forms and at the same time creates scope to contemplate the resulting opportunities. In the process, socio-ecological aspects come to the fore, allowing these sectors to also be structured through the management system.

The decision to introduce DIN EN ISO 14001: 2015 was therefore quickly made.

Over the past few years, we have already had our management structures objectively reviewed in terms of sustainability and compliance through platforms such as

EcoVadis and NOC and have received positive reviews.

The incorporation of the environmental and quality standards together into an integrated management system (IMS) enables through

its standardized format – the high-level-structure – a straightforward supplementation with further components, such as compliance, energy, occupational protection and industrial safety, etc.

... BTG now also certified for Environmental Management

picture: BTG

A large number of measures carried out by BTG to reduce environmental pollution and conserve resources have already been visibly implemented in old and new buildings, in our procedures and in environmentally relevant acquisitions.

For example, five years ago BTG Hamburg moved to an environmentally friendly forwarding facility! The office building was built in passive-house design and the warehouse was built with thermal insulating facade construction including daylight-dependent lighting.

The German Sustainable Building Council's associated award „DGNB Silver“ was also awarded to BTG Olching's property in the MULTIPARK Olching, which was completed in 2013.

Also back in 2013, the

“ground-breaking” ceremony for a new forwarding facility in Plochingen took place. The facility has a PV-system on the roof of its 5,000 m² warehouse. Since its completion in April 2014, the electricity generated by sunlight more than covers the energy requirements of BTG Plochingen and the surplus of alternative energy is constantly fed into the public grid.

However, the implementation of BTG's environmental ideas is not only reflected in these new buildings. All other existing properties are also being examined for more efficient use of resources.

For instance, in 2017 the warehouses at BTG Neuss and BTG Augsburg were completely equipped with new LED tubes (fluorescent tubes), which are 50% more economical and much brighter than the old ones.

Taking influence on the exhaust gas classification of our trucks and the means and modes of transport we choose, or the implementation of environmentally-friendly packaging materials, or the avoidance of waste, etc. are all matters of great importance.

Thanks to the tireless efforts of our employees and in addition to the ISO 9001: 2015 quality certificate, we can now also proudly present the environmental certificate ISO 14001: 2015!

From now on, the new „Silk Road“ starts and ends in Neuss!

picture: BTG

Since 1st July 2018 BTG Neuss – in collaboration with their Chinese partner „Reachway International GmbH“ - has been offering a weekly LCL groupage container service by rail!

For our customers, transports to and from China by rail are a welcome alternative in comparison to the high-priced air freight and the time-consuming sea freight options. Through our Chinese partner

structure we are still able to offer a close-knit monitoring of these transports.

Put us to the test or simply send your enquiry to bahn.neuss@btg.de !

BTG Olching - Major Project for Moscow / Russia

In early August 2017 BTG Olching began a new project in Moscow, Russia, stocking a warehouse there for a renowned German automobile company.

Within the period between early August and mid-September 2017 - and in addition to

their normal daily workload - our dispatchers coordinated 188 full loads (with a peak of up to 10 vehicles a day) with high-quality spare parts for the automobile industry.

This major project was completed within 6 weeks without any problems and to

the fullest satisfaction of our client.
